# SUBJECT INDEX—PART I

## INTRODUCTION

The entries in this index refer to the abstracts by their serial number, not by the page number. The entries are grouped under headings (printed in bold type, e.g. "**Algebra**"). If a heading for a particular subject does not appear, the subject may be in the form of a cross-reference to another heading, perhaps of a more general nature. Many of the headings are subdivided by the use of subheadings, which are indented (i.e. printed slightly to the right) and commence with a small letter.

The information contained in the subject index is illustrated by following example:

Associated with the subheading "polarons" is a 'See' crossreference as follows:

**Polarons** See *Crystal electron states/polarons*

This means that for papers on "polarons" the reader should consult the subheading "polarons" of "Crystal electron states" as displayed above.

## ARRANGEMENT OF HEADINGS AND SUBHEADINGS

The headings and crossreferences are arranged throughout the index in alphabetical order according to the "word by word" system. The subheadings are themselves arranged in alphabetical order under their respective headings.

## ARRANGEMENT OF ENTRIES UNDER HEADINGS

Entries are arranged in four distinct groups as follows:

- First group: arabic numerals
- Second group: English alphabet (A-Z), roman numerals, Greek alphabet (excluding elementary particles)
- Third group: elementary particle symbols i.e. Greek and English alphabet e.g.  $\mu$  (muon), p (proton)
- Fourth group: chemical formulae (including entries beginning with nuclei, e.g.  $^{57}\text{Fe}$ )

## CLASSIFIED LIST OF SUBJECT INDEX HEADINGS

In this list the headings are not arranged in alphabetical order, but are grouped into sections by subject, on the same basis as the arrangement in the fortnightly issues of Physics Abstracts. By using this list the reader can quickly determine all the headings which are appropriate to his subject, and then they can easily be found in the main index in their alphabetical position.

## HEADINGS WITH NO ENTRIES

All the headings in current use in a given year are printed, even those for which there are no abstracts to be recorded. The latter are followed by the announcement "No entries". This confirms that these headings have not been dropped from the index, and entries may appear under them in subsequent issues.

## NUCLEI, ELEMENTS, COMPOUNDS AND OTHER SUBSTANCES

Abstracts on nuclei whose mass number (or mass number range) is given are listed under a set of headings which begin "Nuclei with. . . ." e.g. Nuclei with  $6 \leq A \leq 19$  where A is the mass number.

The names of elements, their compounds, a few compounds of special interest (e.g. "Ruby", "Water") and a few common materials (e.g. "Wood", "Paper") are included as headings or sub-headings (e.g. "barium titanate" under "Barium compounds"). Under these, as well as under the appropriate "subject" headings, are listed any abstracts which contain significant physical information about the element, compound or substance named.

Inorganic compounds of the elements are listed under the first element in the chemical formula, and all the compounds of a given element are grouped under a single heading (e.g. "Sodium compounds"). Alloys are listed under compounds of the named constituents e.g. Au-Ag alloys under "Gold compounds" and "Silver compounds". There are also four special headings for the common alloys: "Aluminium alloys", "Copper alloys", "Iron alloys", "Nickel alloys". Organic compounds are grouped under "Organic compounds", "Polymers", "Plastics" and under special substance headings such as "Paper", "Proteins", etc.; all the latter are listed at the end of the classified list of headings. Metallic co-ordination compounds when regarded as inorganic are listed under the appropriate metallic compound heading (not under organic compounds) e.g. Ni complex, bis(dimethylglyoximate)nickel(II) under "Nickel compounds"

## CLASSIFIED LIST OF SUBJECT INDEX HEADINGS

The headings are grouped into sections on the same basis as the arrangement of the abstracts in the fortnightly issues of Physics Abstracts. A summary of the layout of these sections (these are actually further subdivided), is given below. Each section lists the headings which concern its subject and it follows that many of the headings are listed in several places.

## Chemical elements and inorganic compounds

All the chemical elements are listed by name, followed by their compounds, e.g. "Cadmium, "Cadmium compounds".

"Hydrogen" is subdivided by the subheadings "neutral atoms", "neutral molecules" and "ions". "Deuterium" and "Tritium" are independent headings. "Hydrogen compounds" is supplemented by "Ice", "Steam" and "Water".

"Oxygen" is supplemented by "Ozone" and "Carbon" is supplemented by "Diamonds" and "Graphite"

The following inorganic compounds are further subdivided by subheadings as shown:-

Barium compounds/ barium titanate*	Nitrogen compounds/ ammonia
Cadmium compounds/ cadmium sulphide	ammonium compounds
Calcium compounds/ calcium fluoride	Potassium compounds/ potassium bromide
Gallium compounds/ gallium arsenide†	potassium chloride
Indium compounds/ indium antimonide†	Sodium compounds/ sodium chloride
Lithium compounds/ lithium fluoride	Zinc compounds/ zinc sulphide

\* Ferroelectric properties are listed under "Ferroelectric materials/barium titanate"

† Semiconducting properties are listed under the corresponding subheadings of "Semiconducting materials"

## Organic compounds

Organic compounds are grouped under headings "Organic compounds", "Polymers", "Plastics", "Proteins". "Rochelle salt" is an independent heading.

## Co-ordination compounds

Metallic co-ordination compounds are regarded as inorganic with a few exceptions and are indexed under the appropriate metallic compound heading, (not under organic compounds) e.g. Ni complex, bis (dimethylglyoximate) nickel (II) under Nickel compounds.

## Substance groups

In addition there are the following headings for groups of elements, compounds or substances:-

Actinides	Metals
Actinide compounds	Minerals
Alkali metals	Rare-earth metals
Alkali-metal compounds/ halides	Rare-earth compounds
Alkaline-earth metals	Semiconductors
Alkaline-earth compounds	Semiconducting materials/ gallium arsenide§
Ferrites	germanium§
Ferroelectric materials/ barium titanate†	indium antimonide§
Garnets	silicon§
Halogens	Superconducting materials/ lead
Inert gases	niobium
	Transition metals
	Transition-metal compounds

† Used for ferroelectric properties only

§ Used for semiconducting properties only

|| Used for superconducting properties only

## Alloys

General papers on alloys are indexed under "Alloys". Alloys of specified composition are listed under, either

- (i) special alloy headings (there are five of them: "Aluminium alloys", "Copper alloys", "Iron alloys", "Nickel alloys", "Steel"), e.g. Al-Ni alloys under "Aluminium alloys", and "Nickel alloys".
- (ii) compounds of the named elements, e.g. Mn-Zn alloys under "Manganese compounds" and "Zinc compounds". Silicon-iron under "Iron alloys" and "Silicon compounds".

## Special substances and materials

There are also the following special headings for certain common substances:-

Air	Paper
Blood	Porous materials
Ceramics	Powders
Clay	Quartz
Coal	Rubber
Concrete	Ruby
Fibres	Sand
Gelatin	Seawater
Glass	Soil
Mica	Waxes
Optical materials	Wood

 particle size meas. using laser homodyne spectrometer 9-17224  
 photolysis and spectroscopy for nanosecond reactions 9-6559  
 photon-graviton interaction, detection in external gravit. field 9-10872  
 plasma creation, dynamic parameters in magnetic field 9-21086  
 plasma density meas. by CO<sub>2</sub> laser interferometer 9-5006  
 plasma production, high density and temp. by large power laser 9-17119  
 plasma production and density meas. by light scatt. 9-2989  
 plasma production and heating, theory and experiments, review 9-19546  
 plasma production by focussed CO<sub>2</sub> laser radiation 9-890  
 radar return, meteorological problems 9-10870  
 Raman effect, stimulated, high conversion efficiency, quantitative investigation 9-20533  
 Raman spectrograph, S<sub>0</sub> fundamental modes determ. 9-20941  
 Raman spectroscopy, 50 cps ruby laser excited, signal-noise ratio improvement 9-6560  
 Raman spectroscopy, apparatus with laser excitation 9-16798  
 Raman spectroscopy of single crystals, chemical implications with examples 9-21633  
 Rayleigh scattering and depolarization in liqs., rel. to molec. interactions 9-14850  
 refractive index meas. in liquids showing self focussing and electrostriction 9-9511  
 seismic strain meas., interferometer system 9-10373  
 self-beating technique in light scatt. rel. to translational motions and transport props. of solutions 9-14875  
 semiconductor band-tail spreading energy 9-1541  
 solid irradiation for plasma production 9-11578  
 spark production by train of mode-locked laser pulses 9-11636  
 spark source of highly ionized atom spectra 9-18145  
 spectroscopy, nanosecond absorption using laser photolysis 9-19170  
 thermonuclear plasma production from focussing on LiD surface, n. obs. expts. 9-7171  
 thickness meas. of Cr coatings on brass, from flash spectra produced by laser interaction 9-11762  
 triggering of pressurized spark gap 9-13471  
 u.v. pulsed, use in photoluminescent dosimeter readout, patent 9-13173  
 YAl garnet, Nd doped, opt. refrigeration, fluorescent quantum efficiency 9-1831  
 Ar, 4880 Å, Raman effect of glycerol 9-15890  
 CO<sub>2</sub>, interferometer, plasma density meas. 9-5006  
 CO<sub>2</sub>, vacuum deposition of thin films 9-11775  
 CO<sub>2</sub> laser, fog dissipation 9-4055  
 D<sub>2</sub> ionization, theoretical exam. 9-9383  
 Ge, quantum effects in cyclotron resonance using c.w. HCN laser 9-14070  
 HCN, for e.p.r. abs. in O<sub>2</sub> 9-786  
 HCN, interferometer source for plasma decay study 9-7166  
 He-Ne, in Kerr effect mag. domain microscopy, picture improvement technique 9-16352  
 He-Ne, optical sampling of pulse by Nd:glass laser 9-6531  
 N<sub>2</sub>O, vibr. relax. determ. 9-7030  
 Nd:glass, optical sampling of He-Ne pulse 9-6531
